DEEPAK RAGHUWANSHI

Lead Cloud DevOps & Site Reliability Engineer (SRE)
Ahmedabad, India | +91-9425045390 | raghuwanshideepak79.dr@gmail.com | linkedin.com/in/deepakraghuwanshi

PROFESSIONAL SUMMARY

Accomplished **Lead Cloud DevOps & Site Reliability Engineer (SRE)** with 8+ years of experience engineering resilient multi-cloud platforms, automating enterprise infrastructure, and optimizing mission-critical airline systems. Proven track record in high-availability distributed architectures across AWS and Azure, reducing deployment cycle times from 3 hours to 20 minutes and consolidating 700+ pipelines into scalable workflows. Deep hands-on expertise in Kubernetes cluster operations, Infrastructure as Code (Terraform), GitOps, full-stack observability (SLIs/SLOs/error budgets), and automated incident mitigation. Adept at driving FinOps cost efficiency, embedding DevSecOps controls, and maintaining 99.99% service availability for high-throughput enterprise platforms.

CORE COMPETENCIES & TECHNICAL SKILLS

- **Cloud & Multi-Cloud Infrastructure:** AWS (EKS, EC2, IAM, S3, CloudWatch, VPC), Microsoft Azure (AKS, App Services, Key Vault, VNet, Blob Storage), Hybrid Architecture, FinOps & Resource Optimization.
- **Containers & Platform Engineering:** Kubernetes (EKS, AKS, Red Hat OpenShift), Docker, Helm 3, KEDA, Ingress Controllers (NGINX/Traefik), Microservices Design, Cluster Autoscaling.
- **Site Reliability Engineering (SRE):** SLIs / SLOs / SLAs, Error Budget Governance, High Availability (HA/DR), Incident Management & RCA, Capacity Planning, Chaos Engineering.
- **Observability & Telemetry:** Prometheus, Grafana, Datadog, Azure Monitor, Log Analytics, Dynatrace, Distributed Tracing (OpenTelemetry), Runbook & Self-Healing Automation.
- **CI/CD & GitOps Automation:** ArgoCD / Flux, Azure DevOps Pipelines, Jenkins, GitHub Actions, GitLab CI, Branching Strategies & PR Governance, JFrog Artifactory.
- **Infrastructure as Code (IaC) & Scripting:** Terraform (Modular Architecture, State Governance), ARM Templates / Bicep, Python, Bash, PowerShell.
- **DevSecOps, Identity & Compliance:** SonarQube, JFrog Xray, SAST / DAST, SCA, Trivy, Secret Lifecycle Management (Key Vault, HashiCorp Vault), RBAC & Zero Trust Principles.

PROFESSIONAL EXPERIENCE

Qatar Airways | DevOps Lead – Multi-Cloud & SRE Operations

Feb 2025 – Present

- Internal Developer Platform & Central CI/CD: Architected enterprise-grade, reusable CI/CD pipeline templates adopted across development squads, standardizing release workflows and eliminating redundant configuration overhead across hundreds of repositories.
- OpenShift & GitOps Container Operations: Containerized legacy and modern .NET microservices via optimized Docker multi-stage builds, designing an automated container image promotion lifecycle and GitOps deployment model targeted for Azure Red Hat OpenShift (ARO).
- Hierarchical Helm & Terraform Secrets Integration: Automated multi-tier Helm chart configurations by segregating variables into global, shared, and service-specific tiers, dynamically synchronizing values from Terraform data blocks and automating runtime credential injection using External Secrets Operator (ESO).
- Enterprise DevSecOps & Governance: Instituted automated DevSecOps guardrails by embedding SAST/SCA security scans, branch protection policies, mandatory pull request reviews, and build validation gates directly into core pipelines to enforce zero-trust pre-merge compliance.
- State-Based Database Delivery: Engineered an automated state-based database deployment pipeline utilizing a declarative "Build & Apply" schema migration model, eliminating manual SQL rollout bottlenecks and deployment rollbacks.
- Mobile CI/CD Infrastructure: Designed and deployed from scratch, an automated continuous delivery engine for iOS (.ipa) and Android (.apk) applications, streamlining build packaging, code signing, and distribution cycles for airline digital interfaces.
- Automated Operational Telemetry & Alerting: Built end-to-end audit and health automation pipelines generating dynamic HTML/CSV compliance dashboards and real-time alerts for deployment failures, security policy breaches, and site availability.

Roche Information Solutions | DevOps Engineer – Cloud & Platform Reliability

Nov 2022 – Jan 2025

- Release Modernization & Velocity: Consolidated enterprise release footprint across 11 environments from 700+ pipelines into 64 multi-stage YAML pipelines; introduced one-click deployments, slashing release cycles from 1 month to 1 day.
- Kubernetes & Microservices Reliability: Managed multi-cloud Kubernetes clusters (AKS/EKS) hosting critical microservices; implemented automated health probes, pod autoscaling, and centralized ConfigMap/Secret management to ensure 99.9%+ runtime reliability.
- Infrastructure as Code (IaC): Centralized multi-environment infrastructure provisioning using modular Terraform codebases with remote state locking, preventing configuration drift across cloud environments.
- DevSecOps & Quality Assurance: Embedded automated security and compliance gates into pipelines using SAST, SCA, and JFrog Xray scans; enforced branch policies, mandatory PR reviews, and automated build validations to prevent pre-release vulnerabilities.
- FinOps & Resource Optimization: Deployed automated telemetry alerts and monitoring scripts to track Kubernetes pod CPU/memory utilization, rightsizing idle workloads and driving measurable cloud infrastructure savings.
- Instituted enterprise observability with Azure Monitor, Prometheus, and Grafana tracking SRE Golden Signals, wiring automated self-healing runbooks that cut MTTR by ~35%.
- Spearheaded multi-cloud FinOps governance across AWS and Azure via automated tag compliance, KEDA/pod right sizing, and orphaned disk reclamation, lowering compute waste by 20%+.

Tietoevry | Senior Platform Engineer (Cloud DevOps)

Nov 2021 – Nov 2022

- Engineered automated provisioning frameworks for on-premises and Azure cloud environments utilizing Terraform, Azure DevOps YAML pipelines, and PowerShell/Python scripts.
- Automated enterprise secret lifecycle and SSL/TLS certificate rotation strategies via Azure Key Vault, eliminating credential drift and service outages caused by expired certificates.
- Orchestrated production triage for infrastructure incidents across Azure App Services, Function Apps, self-hosted build VM pools, and IAM configurations.
- Designed modular Terraform codebases with remote state locking and reusable modules, enforcing consistent multi-region infrastructure environments.
- Partnered with software engineering leads to establish microservice design patterns, standardized container health probes (liveness/readiness), and automated rollback mechanisms.

Wipro | Infrastructure Process Automation & Cloud DevOps Engineer

Jul 2018 – Nov 2021

- Received the **Best Performance in Automation Award** for eliminating manual operational overhead across enterprise hybrid environments.
- Automated server administration, vulnerability patching, and compute provisioning across AWS, Azure, and VMware using PowerShell, Bash, and Terraform.
- Implemented automated health-check routines, disk volume expansion scripts, and automated failover monitoring routines with custom alerting pipelines.
- Integrated code quality and vulnerability scanners (SonarQube, JFrog) into Jenkins and Azure DevOps CI pipelines to enforce quality gates across build stages.
- Built automated reporting tools consolidating metrics from ServiceNow, monitoring logs, and infrastructure repositories into executive operational dashboards.

CERTIFICATIONS

- **Certified SAFe® 6 DevOps Practitioner** – Scaled Agile Inc. (2025)
- **HashiCorp Certified: Terraform Associate** – HashiCorp (2021)

EDUCATION

- **Bachelor of Computer Applications (BCA)** | Amity University, Gwalior (2018)
- *Minor Specialization in Animation* | Amity University, Gwalior (2018)
